Danil Grantsev

Junior Application Security / DevSecOps Engineer

Vietnam (UTC+7) · Open to remote · malooyy6@gmail.com · t.me/rezzodan · github.com/Rezzodan/Portfolio

SUMMARY

Full-stack developer with **2.5 years building and running a production fintech platform** (ASP.NET Core, Python, React, Docker), moving into application security. I know where real systems break — authentication, integrations, webhooks, secrets, infrastructure — because I built and operated them. Practicing attack and defense in a home lab: OWASP Top 10 on DVWA, Wazuh SIEM, Suricata IDS.

EXPERIENCE

Full-Stack Developer (Platform & Infrastructure) — LLC "100KVADRATOV" **Mar 2024 – Present**

Fintech / credit-consulting company · Ufa, Russia · remote

- Designed and maintained REST APIs (ASP.NET Core, FastAPI, Django REST Framework) with JWT authentication behind a Traefik HTTPS reverse proxy, serving a client mini app, an operator admin panel, a lawyer workspace and a partner portal.
- Found and fixed a **business-logic flaw** in CRM webhooks that re-triggered partner payouts on installment deals; replaced it with explicit no-re-accrual rules per pipeline.
- Hardened a webhook-driven automation robot: allowlists checked before any file download or CRM write, HMAC-signed callbacks, per-deal file locks and PII masking in logs.
- Processed untrusted documents: credit-bureau reports (NBKI, OKB), passport scans and PDFs through OCR and parsing pipelines, with strict category checks before data reached the CRM.
- Ran production for **7 services** on a self-hosted server (Docker Compose, Traefik TLS, PostgreSQL, self-hosted mail): secrets in environment config only, backups, reboot recovery and incident runbooks; resolved 7+ production incidents.
- Shipped one React/TypeScript codebase as both Telegram and MAX Mini App through a platform bridge layer.

SECURITY PROJECTS

- **OWASP Top 10 lab:** reproduced SQL injection (auth bypass, UNION) and reflected XSS on DVWA and documented the fixes — parameterized queries, output encoding, CSP, HttpOnly and SameSite cookies.
- **Detecting web attacks:** Wazuh SIEM on web server logs; found that default rules missed boolean SQL injection, wrote a custom detection rule and validated it in `wazuh-logtest`.
- **SSH brute-force monitor (Python):** log parser with thresholds, GeoIP enrichment and Telegram alerts; configuration through environment variables, unit tests and GitHub Actions CI.
- **Incident & audit reports:** 5 incident analyses (tcpdump, Wireshark) and a NIST CSF / PCI DSS / GDPR controls assessment with a remediation plan.

SKILLS

Application security: OWASP Top 10, authentication and authorization (JWT), input validation, webhook security (HMAC), secrets handling, business-logic review

Development: C#, ASP.NET Core, EF Core, Hangfire, Python, FastAPI, Django / DRF, TypeScript, React, PostgreSQL, REST

Infrastructure & tools: Docker, Traefik / TLS, Linux, Bash, Git, GitHub Actions, Wazuh, Suricata, Nmap, Wireshark

Languages: Russian (native), English (A2, improving)

CERTIFICATIONS & EDUCATION

- **Google Cybersecurity Professional Certificate** (Coursera) — in progress, 3 of 8 courses completed
- **C Programming Fundamentals** — Stepik, 2025
- **Bashkir College of Economics and Law** — Banking and Financial Services, 2017 – 2019
