

Full-Stack Developer | Purple Team Security

Full-Stack Developer with 2+ years of experience building end-to-end fintech products. I combine strong engineering skills (ASP.NET Core, Python, React, Docker) with growing expertise in cybersecurity (Purple Team).

What I Do

Core Focus Areas

Engineering meets security — building robust fintech platforms while developing deep cybersecurity expertise across the full Purple Team spectrum.

Seeking roles as **SOC Analyst L1**, **Junior Penetration Tester**, or **Security Engineer**.

Full-Stack Development

Fintech platforms, CRM integrations (Bitrix24), Telegram/MAX mini apps, document processing (PDF/OCR)

Self-Hosted Infrastructure

Docker, Traefik, Mailcow, backups, runbooks, HTTPS production

Cybersecurity (Purple Team)

Isolated lab, Nmap, Wireshark, DVWA, Python monitoring, SIEM (Wazuh)

Professional Experience

LLC «100KVADRATOV»

Full-Stack / Platform, Purple Team Security

March 2024 – Present (2.5 years) | Ufa, Russia (Remote)

01

Production platform

Built and operated a fintech stack end-to-end: Telegram/MAX mini-apps, core ASP.NET API, operator admin, lawyer workspace, partner commissions (Django), Bitrix24 CRM, and self-hosted infrastructure with Docker, Traefik, and Mailcow.

02

Key achievements

- Client onboarding: registration, e-signature, bureau report upload, deal statuses
- NBKI/OKB/SB parsing, bots, Hangfire jobs, work-mailbox provisioning
- Bitrix sync with funnel guards; partner webhooks without double payouts on installments
- Lawyer pipeline Sync → Report → Claims → Send (OpenClaw/Mailcow)
- Production ops: HTTPS, backups, reboot bring-up, mail quotas, remote runbooks

03

Hard problems solved

MAX webview/SDK conflicts; Bitrix UF/Tilda fallbacks; Mailcow vs host Postfix after reboot; Gmail IP blocks; OCR/PDF noise and API timeouts — all resolved without downtime.

Stack: C#/ASP.NET, Python (FastAPI/Django), React/TypeScript, PostgreSQL, Docker, Bitrix24, OCR, Mailcow.

Critical Problems Solved

7+ production-critical issues resolved independently — each one documented and shipped.

MAX + Telegram SDK Conflict

Designed platform bridge, boot markers, image rebuilds to resolve webview incompatibility

Postfix Blocking Mailcow :25

Masked host Postfix after reboot to restore mail delivery

Gmail 550 IP Reputation

Implemented relay path solution — not a simple SPF fix

CloudFlare Port Conflicts

Resolved CloudFlare vs lawyer OpenClaw conflicts by moving agent into lawyer stack

Office DNS Risk

Built diagnose-only rule to prevent LAN internet disruption from DNS misconfiguration

Partner commissions — installment double-pay fix

CRM returned paid installment deals to the main funnel and triggered partner payouts again.

Tech Stack: C# · ASP.NET Core · Python · FastAPI · Django · React · TypeScript · PostgreSQL · REST APIs · Docker · Traefik · Telegram Mini Apps · OCR · Webhooks · JWT · CI/CD

Purple Team Security Lab (Self-Study)

2026 – Present

Isolated Testing Lab

Built a safe QEMU environment with Metasploitable 2 and port forwarding for controlled vulnerability testing.

Traffic Analysis

Captured FTP traffic with tcpdump and Wireshark, then documented plaintext credentials found during inspection.

Web Exploitation Practice

Practiced SQL Injection and XSS on DVWA, documenting both exploitation techniques and defensive measures.

Real-Time Alerting

Detected live web attacks using rule ID 31106, covering SQLi and XSS activity.

Deep Reconnaissance

Ran full port scans with Nmap (-p-, -sV), exported XML, and parsed reports in Python.

Detection Automation

Developed a Python SSH log monitor for Failed password events with Telegram alerts and GeoIP enrichment.

SIEM Deployment

Deployed Wazuh SIEM in Docker and connected a Wazuh agent on Kali for centralized monitoring.

Framework Mapping

Mapped alerts and findings to MITRE ATT&CK, GDPR, NIST 800-53, and PCI DSS.

Technical Skills

Development

C# · ASP.NET Core ·
Python · FastAPI ·
Django · React ·
TypeScript · PostgreSQL
· REST APIs · Docker ·
Traefik · Bitrix24 ·
Telegram Mini Apps ·
OCR · JWT · CI/CD

Cybersecurity (Purple Team)

Linux · Kali Linux · Bash ·
Nmap · Wireshark ·
tcpdump · Suricata ·
SQL Injection · XSS ·
DVWA · QEMU ·
Metasploit · Log
Analysis · Security
Monitoring · Telegram
Bot API · SIEM (Wazuh) ·
MITRE ATT&CK · Purple
Team

Soft Skills

Problem-Solving ·
Ownership ·
Communication · Self-
Learning · Adaptability ·
Analytical Thinking ·
Time Management ·
Resilience

Core Competencies

Problem-Solving

Solved 7+ critical production issues independently, each documented systematically

Ownership

Built and ran full product stack end-to-end with no hand-holding

Communication

Documented all projects on GitHub with English READMEs for international audiences

Adaptability

Relocated to Vietnam, thrived in remote work, continuous learning mindset

Self-Learning

Completed 6-day Purple Team course while working full-time

Analytical Thinking

Parsed NBKI data, debugged OCR pipelines, built Python parsers for complex data

Education & Certifications

Bashkir College of Economics and Law

Banking and Financial Support Services

September 2017 – June 2019

Google Cybersecurity Certificate

2026 – Present

In Progress

Python · SQL · Linux · SIEM · IDS/IPS · Threat Analysis · Incident Response

Purple Team Security Course

Self-Study | 2026

QEMU · Nmap · Wireshark · DVWA · Wazuh
SIEM · MITRE ATT&CK

C Programming Fundamentals — Stepik

Completed

Result: 82% **Topics:** C · Algorithms · Problem-Solving · Data Structures **Link:**
